

Hikma Health 2021 In Review

March 1, 2022

To Our Supporters:

We founded Hikma Health to fulfill a singular mission: creating a world where every person is empowered with personalized healthcare, no matter where they are. With your support, our team created the leading open source and free health data system for refugee and migrant healthcare. As we embark on new challenges in 2022, we want to take a moment to sincerely thank you for your support in 2021.

Your generosity helped us accomplish a great deal this last year. Below, we outline a few ways that your giving made an impact. In 2021:

- Our team completed the final build of the Hikma Health system based on feedback from our early clinical partners. Our free and open source mobile application offers online-offline syncing for secure health data and is available in English, Spanish, and Arabic. You can read more about the Hikma Health system in our [recent publication](#). We also describe the technical architecture of the system in more detail in another [publication](#). You can follow our latest releases on our [Github](#).
- We successfully completed our custom deployments of the Hikma Health system for [Endless Medical Advantage](#) (EMA) in Bekaa, Lebanon and [Nueva Vida Health Clinic](#) in Ciudad Sandino, Nicaragua. We also supported these clinics as they transitioned to have their deployments of the Hikma Health system independently supported by technical staff at each clinic. These clinics have traditionally relied on paper records or spreadsheets to inform patient care, and are now able to deliver personalized, continuous care using the Hikma Health system.
- We launched our Year of Migrant Health program to expand the global reach and impact of Hikma Health. As part of this program, we are providing funding, technical support, and operational guidance to support independent global deployment of the Hikma Health system. From a number of qualified applicant organizations, we selected [eight](#)

[clinical nonprofit organizations](#) in eight different countries, serving tens of thousands of refugee, migrant, and low-income populations around the world, to deploy the Hikma Health system.

- We are grateful to have received financial support in 2021 from a number of motivated and committed individual donors. We also received generous grants from HP Enterprise, the Gerson Lehrman Group, and Fast Forward. We have continued to spend 100% of our funding directly on development and deployment of the Hikma Health system.

In 2022, we look forward to evaluating the positive impact of the Year of Migrant Health program on creating internal capacity and sustainable impact for clinical organizations around the world. We will continue to conduct research to rigorously monitor the impact of the Hikma Health system on our partner organizations, their providers and their patients. The ongoing war in Ukraine and the emerging refugee crisis continues to motivate our work building systems to support refugee health.

We have been empowered by your generosity to positively impact the lives of over 100,000 people around the world. We invite you to continue supporting our mission to empower people with free and personalized healthcare by [making a gift online](#) or emailing us at donate@hikmahealth.org. Thank you for your continued support of our work over the last four years — we simply could not do this without you.

In Gratitude,

Senan Ebrahim
